

- 1.) Implementing the background process to notify users if items they are interested in become available.
- 2.) Implementing push notifications, mainly finding the most feasible way for our situation.
- 3.) Translating remaining ratings functions into SQLAlchemy framework.
- 4.) Implementing a mechanism on the backend server to handle the private chat system (Perhaps Firebase messaging)
- 5.) Scale down images to implement thumbnails for the feed
- 6.) Filter for the feed to display items that the user is interested in based on the item's tag.
